 **Portfolio Website:** <https://pk-24316.github.io/My-Portfolio/>

Professional Summary

Motivated and detail-oriented Computer Science student with a strong foundation in software development, object-oriented programming, and problem-solving. Experienced in building applications using C++ and Python, including projects involving data structures, file handling, and GUI development. Passionate about learning new technologies and adapting to diverse development environments.

My work is showcased on GitHub and my personal portfolio, where I publish projects demonstrating full-cycle software development from design to deployment.

Education

Bachelor of Science in Computer Science and Applied Mathematics

University of Johannesburg – South Africa

2022 - 2023

Bachelor of Science in Computer Science

University of South Africa — South Africa

Expected Completion: 2026

Relevant Modules:

- Data Structures and Algorithms
- Object-Oriented Programming
- Databases
- Computer Networks

- Theoretical Computer Science
 - Formal Logic
-

Technical Skills

Programming Languages:

- C++
- Python
- JavaScript (basic)
- SQL
- Delphi
- HTML/CSS

Technologies & Tools:

- Object-Oriented Programming (OOP)
- File Handling & Serialization
- Data Structures (Linked Lists, Arrays, etc.)
- Git & GitHub
- Qt Creator / PyQt
- HTML, CSS, JavaScript

Core Competencies:

- Debugging and optimization
 - Problem-solving
 - Writing clean, maintainable code
 - Fast learner and adaptable
-

Projects

Library Management System (C++)

 <https://github.com/PK-24316/C-/tree/main/Library%20Management%20System>

Designed using OOP principles (inheritance, polymorphism)

- Implemented file handling for persistent storage
 - Built a console-based interface
-

Hangman Game (C++)

 <https://github.com/PK-24316/C-/tree/main/Hangman/main>

Developed a fully interactive console-based Hangman game

- Implemented string manipulation, loops, and condition-based logic
 - Designed game mechanics including word selection, guessing system, and win/lose conditions
 - Focused on clean code structure and user experience
-

Rock, Paper, Scissors Game (C++)

 <https://github.com/PK-24316/C-/tree/main/Rock%2C%20Paper%2C%20Scissors/main>

- Built a command-line game allowing user vs computer gameplay
 - Implemented random number generation for computer choices
 - Designed logic for determining outcomes and tracking results
 - Demonstrated problem-solving and control flow skills
-

Tic Tac Toe Game (Python)

 <https://github.com/PK-24316/Python/tree/main/Tic-Tac-Toe>

Built GUI applications using PyQt

- Developed a fully functional Tic Tac Toe game
 - Implemented game board logic, turn-based system, and win detection
 - Applied clean code practices and modular design
 - Demonstrated problem-solving and algorithmic thinking
-

Experience

Volunteer – Sound Engineering (Church)

Johannesburg, 2024 till date

- Managed live audio systems and resolved technical issues
 - Worked in a fast-paced, team-oriented environment
-

Additional Information

- Actively building and publishing projects on GitHub
 - Strong interest in full-stack and application development
 - Eager to learn new frameworks, tools, and technologies
-
